

**Evi Vasili has been awarded highly prestigious Marie Skłodowska-Curie Postdoctoral Fellowships by the European Commission**

The European Commission awarded Evi Vasili with one of the prestigious and highly competitive Marie Skłodowska-Curie Actions (MSCA) postdoctoral fellowships to work at BRI under the supervision of Savvas Christoforidis. Her project is titled: "Amyloid- $\beta$  clearance in Alzheimer's disease: Unravelling the role of endocytic pathways of endothelial cells". In this project, BRI will collaborate with IMBB-FORTH (group of Nektarios Tavernarakis, co-PI), Ionian University (Professor Panagiotis Vlamos) and Johns Hopkins University (Assistant Professor Vasiliki Machairaki) to address comprehensively the role of the distinct endocytic routes, and the underlying mechanisms, in clearance of A $\beta$  peptide in AD, by brain endothelial cells.
